

MUDIMALA YESHWANTH GOUD

mudimalayeshwanthgoud@gmail.com | (+91) 6303315169 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY:

- ❖ Associate Data Scientist with 1 year of experience building production-grade AI/ML solutions specializing in NLP, LLM systems, RAG architecture, and semantic search. Expert in developing scalable AI applications using Python, Fast API, vector databases, and modern ML frameworks. Skilled in OCR, NER pipelines, document intelligence, cloud platforms (GCP, AWS), SQL analytics.

SKILLS:

- ❖ **Programming & Core:** Python, Java, C, SQL
- ❖ **AI/ML Engineering:** Feature Engineering, Random Forest, XGBoost, Logistic Regression, SMOTE, Model Tuning, AUC/ROC
- ❖ **Tools & Platforms:** Git, GitHub, Bitbucket, Postman, Google Collab
- ❖ **Cloud & Data** Looker, Looker Studio, GCP (Big Query, Firestore, GCS Compute Engine), AWS (S3, EC2), PostgreSQL, MySQL, Oracle SQL, Hibernate, FAISS, ChromaDB, Pinecone
- ❖ **NLP & LLM Tools:** RAG, Transformers, Prompt Engineering, NER, OCR, PII Detection, Image Masking, ASR
- ❖ **Deployment Tools** Streamlit, Flask, Docker, Gradio, Fast API
- ❖ **Additional Skills:** Spring Framework, Spring Boot, Data jpa, React, Node

EDUCATION:

- ❖ Computer Science Engineering| ICFAI University CGPA: 7.45| (2021-2025)

EXPERIENCE:

Associate Data Scientist | Motivity Labs (March'2025-Present)

- Developed NLP and RAG-based AI applications using Sentence Transformers, FAISS, ChromaDB, and LLMs (Gemini, GPT) for enterprise semantic search.
- Developed real-time dashboards in Looker by modelling PostgreSQL datasets and integrating cloud APIs.
- Worked closely with cross-functional teams, including DevOps and Pre-Sales, to deliver efficient AI solutions using quantized LLMs, GitHub-based collaboration, Agile practices, and modern deployment tools.

Backend Intern | Dataquad Pvt Ltd (Jan 2025 – Feb 2025)

- Developed REST APIs using Java, Spring Boot, and Spring Data JPA with MySQL.
- Implemented one-to-many entity relationships, CRUD operations, and data filtering with Postman testing.
- Practiced version control with Git and followed structured coding and deployment practices.

PROJECTS:

TalentFlow AI – Intelligent Candidate Evaluation System

- Created an AI-driven resume evaluation and ranking platform using NLP and LLM analysis

- Implemented semantic search with FAISS to extract candidate experience relevant to job descriptions.
- Designed automated scoring (Skill Score, matching skills, experience score, rejection reasoning).
- Built a full-stack interface in React with real-time results and CSV export.
- Techstack: Python, Fast API, Big Query, Firestore, GCS bucket, React

CodeZen – AI Codebase Understanding Tool

- Developed a code intelligence tool that analyzes entire repositories and generates structured summaries.
- Extracted architecture-level insights using AST parsing and embeddings.
- Implemented automated Git workflows. enabling developers to manage and analyze projects directly through a single unified CLI tool.
- Packaged into a CLI for seamless use by developers in real-world codebases.
- Techstack: Python, AST Parsing, Embeddings, CLI Packaging

AIWA – Multi-User AI Voice Assistant

- Built a real-time voice-based AI support system that uses Deepgram ASR to transcribe live audio streams in English, Hindi, and Marathi.
- Integrated ASR (Deepgram) for speech recognition and Piopiy for automated call workflows.
- Developed intent detection and conversational flows for enterprise customer support.
- Enabled real-time session tracking, call routing, and workflow orchestration.
- Techstack: LLMs, RAG, ChromaDB, Deepgram-ASR, Piopiy, Python

SafeLens – AI-Powered Privacy & Sensitive Data Detection Platform

- Built a privacy detection system that identifies PII from text, documents, and images using OCR and NER.
- Implemented LLM-based privacy scoring, risk analysis, and compliance-aware prompt optimization.
- Developed image-masking pipelines to redact faces, signatures, IDs, and sensitive text regions.
- Designed modular Fast API services for scanning, redaction, and report generation.
- Integrated a React-based interface to visualize safety scores and redacted outputs.
- Techstack: Fast API, OCR, NER, LLMs, React, Image Processing.

DocuSense – Q&A Retrieval System

- Built a Q&A system that answers user queries based on uploaded PDFs using semantic search and LLMs and Parsed documents using PyMuPDF and created embeddings with Sentence Transformers (MiniLM).
- Indexed documents using FAISS and retrieved relevant chunks for generative answering.
- Integrated Hugging Face Transformers and designed a Gradio interface for question answering.

Backorder Prediction

- Built a predictive model to determine if a product will go on backorder based on inventory, demand, and supply chain features.
- Performed data cleaning, feature engineering (e.g., lead time normalization, historical sales trend analysis), and handled class imbalance using SMOTE.
- Trained and tuned models (Logistic Regression, Random Forest, XGBoost) with GridSearchCV and RandomizedSearchCV and Evaluated models using precision, recall, and AUC-ROC to select the best-performing solution.

CERTIFICATE:

- ❖ **AWS** - Fundamentals of Machine Learning and Artificial Intelligence and Introduction to Agentic AI on AWS
- ❖ **Infosys** - Artificial Intelligence Foundation Certification
